

## **Secure, Smart & Scalable: Engineered a Next-Gen Crypto Exchange For Canadian Client**

---

### **Client Profile**

Our client is a well-established **blockchain-focused hardware manufacturer** based in Canada. With over a decade of experience in designing and supplying **custom cryptocurrency mining rigs**, they serve crypto farms, institutional miners, and blockchain data centers across North America and Europe.

In 2023, with the rise of **decentralized finance (DeFi)** and mainstream adoption of crypto assets, the client decided to expand from hardware solutions into **digital platforms**—specifically by launching their **own crypto exchange and wallet ecosystem** that could rival the industry leaders.

### **Business Challenge**

As crypto adoption grew among global investors, the client identified several gaps in the market:

- **Overly complex user interfaces** of existing trading platforms
- **Lack of real-time performance** and frequent platform outages
- **Insecure wallets and poor admin control panels**
- **Fragmented mobile experiences** without a unified codebase
- **Limited transparency** in order books and market depth

Their goal was to offer a **secure, modern, and scalable cryptocurrency exchange platform** that could support multiple digital assets, offer lightning-fast trade execution, and serve both **novice and professional traders** globally—especially across **North America and Europe**.

To achieve this, they partnered with **Suretek Infosoft**, a trusted technology partner with deep expertise in **blockchain, Web3, and cloud-native product engineering**.

### **Suretek's Solution**

Suretek Infosoft partnered with the client to deliver a comprehensive, future-ready cryptocurrency exchange platform designed for scalability, performance, and regulatory compliance. Developed

## SURETEK INFOSOFT

*Case study*

with a deep understanding of the global digital asset landscape, the solution focused on innovation,

security, and seamless user experience, aligning with the expectations of users across the **US, UK, and Canada**.

### **Intuitive Frontend with React 18 and Tailwind CSS**

We engineered a modern, responsive frontend using **React 18** and **Tailwind CSS**, ensuring optimal performance and usability across devices.

- Leveraged **React 18's concurrent rendering** for seamless interactions and speed.
- Integrated **real-time trading charts** and dashboards using D3.js and TradingView APIs.
- Designed a mobile-first interface with **dark/light theme toggle** and drag-and-drop panels.
- Streamlined **KYC onboarding process** with intuitive forms, live validation, and status tracking.

### **Cross-Platform Mobile Experience with React Native**

To reach mobile users efficiently, we built a single codebase hybrid app using **React Native**:

- Integrated **Swift bridge** for iOS and **Kotlin bridge** for Android native performance.
- Supported **biometric authentication** (Face ID/Fingerprint) for secure mobile access.
- Enabled **real-time alerts** through push notifications for trade execution and price updates.
- App published on App Store and Google Play with high-performance and consistent UX.

### **Non-Custodial Wallet with Web3.js and Ethereum Smart Contracts**

Each registered user was provisioned a **non-custodial wallet** secured through blockchain technologies:

- Built using **Web3.js** to interact with **Ethereum, Bitcoin, and Polygon** networks.
- Supported multiple tokens including **ERC-20, USDT, and BTC**.
- Enabled wallet backup, on-chain transaction tracking, and seamless **MetaMask integration**.
- Smart contract automation for wallet actions like deposit, withdraw, and token swap.

### **Ultra-Fast Trading Engine with Node.js & WebSocket**

We developed a proprietary **low-latency trading engine** to meet institutional trading demands:

- Real-time **order matching engine** using Node.js and WebSockets.
- Live **depth charts, tickers, and trade book** updates with millisecond refresh rates.

## SURETEK INFOSOFT

*Case study*

- AI-driven **auto-balancing algorithm** for order book management during volatility.
- High-throughput trade execution even during market surges.

### Advanced Admin Portal with Role-Based Access

Suretek delivered a powerful back-office admin panel to manage operations and compliance:

- Developed using **Next.js** and **Material UI** for modular, maintainable components.
- Role-based access controls for different stakeholders (support, compliance, finance).
- KYC/AML compliance integrations with **Jumio**, **Onfido**, and **Shufti Pro**.
- Admin tools for fee configuration, user approvals, transaction audits, and market control.

### Secure Fiat-Crypto Integration

To allow users in the US, UK, and Canada to easily move between fiat and crypto:

- Integrated payment gateways like **Stripe**, **CoinPayments**, and **Plaid** for bank linkage.
- Implemented **ACH**, **SEPA**, and **SWIFT** support for fiat on-ramping/off-ramping.
- Real-time **FX rate APIs** to ensure transparent and fair conversions.
- Smart contracts enforce conditional trade execution and settlement.

### Military-Grade Security & Global Compliance

Security and compliance were core to our architecture:

- Implemented **AES-256** encryption and **TLS 1.3** for secure data handling.
- Protected API access with **JWT-based authentication** and rate-limiting.
- Enforced **Two-Factor Authentication (2FA)** and biometric login options.
- Complied with **GDPR**, **FINTRAC (Canada)**, **FCA (UK)**, and **ISO 27001** standards.

### Cloud-Native DevOps Infrastructure on AWS + Kubernetes

Our platform was deployed on a **high-availability cloud infrastructure**:

- Hosted on **AWS EC2**, **RDS**, and **EKS** for resilience and scalability.
- Utilized **Docker** containers for isolated microservices.
- CI/CD pipelines built with **GitHub Actions**, integrated with **SonarQube** for code quality.
- System monitoring with **Prometheus** and visualization via **Grafana dashboards**.

## **Analytics, AI & User Engagement Tools**

To drive insights and increase platform retention:

- Embedded **AI recommendation engine** for asset suggestions based on trading history.
- Integrated **Dialogflow-based chatbot** for instant user support.
- Deployed **Google Analytics 4** and **Hotjar** for behavior tracking and funnel optimization.
- Implemented **predictive analytics** to forecast asset trends and risk alerts.

## **Impact Delivered**

- **85% increase** in verified users in 90 days — driving rapid **user growth** and acquisition.
- **\$6.2M+ trade volume** in 3 months — reflecting strong **platform adoption** and activity.
- **20,000+ app downloads** in 60 days — boosting **mobile engagement** on iOS and Android.
- **99.98% uptime** under peak load — ensuring reliable **platform performance** and trust.
- **0 security breaches** reported — maintaining top-tier **data protection** and compliance.
- **42+ countries reached**, 65% from NA & Europe — expanding **global user base** effectively.
- **<200ms order execution** — delivering ultra-fast **trading experience** with optimized engine.

## **Technologies Used**

- **Frontend:** React 18, Tailwind CSS, Next.js, Material UI
- **Mobile:** React Native, Swift (bridge), Kotlin (bridge)
- **Backend:** Node.js, Express.js, Java Spring Boot
- **Blockchain:** Ethereum, Web3.js, MetaMask, Smart Contracts
- **Database:** MySQL 8.0, Redis, MongoDB
- **Security:** JWT, 2FA, TLS, AES-256, KYC/AML Compliance
- **Cloud & DevOps:** AWS (EC2, S3, RDS), Docker, Kubernetes, GitHub Actions
- **Analytics & Monitoring:** GA4, Grafana, Prometheus, Dialogflow, D3.js

## **Why It Matters**

As the demand for cryptocurrency trading surges globally, hardware manufacturers are uniquely positioned to extend their value chain beyond mining equipment. By launching a secure, high-performance crypto exchange platform, manufacturers can directly engage with traders, enhance brand visibility, and tap into the fast-growing fintech space.

## **SURETEK INFOSOFT**

*Case study*

This strategic move not only diversifies revenue streams but also transforms the company from a product supplier into a complete blockchain ecosystem provider—bridging hardware, software, and digital finance under one roof.

### **Conclusion: A Global-Grade Exchange Platform Built for the Future**

This project showcases how Suretek empowered a Canadian blockchain hardware leader to **transition into the fintech software space** with a **cutting-edge crypto exchange platform**. Our solution met the demands of today's crypto traders while staying ready for tomorrow's blockchain innovations.

Whether you're in the **US, UK, or Canada**, and looking to build a **crypto exchange, DeFi app, or blockchain wallet**, Suretek brings the **technical expertise, compliance knowledge, and innovation mindset** needed to take your product from idea to impact.
